Subject: Review and Approval of the "Pre-Remediation Investigation Report"
for the SPX Former Lindberg/MPH Facility in Watertown, WI
DNR Case # 02-28-555133

Dear Mr. Galacki:

Thank you for having TRC send in the above-referenced report, dated August 28, 2018. The report describes the results of additional sampling and provides recommendations for additional work at the former Lindberg/MPH site. The report was received by the Department, along with the appropriate review fee, per chapter NR749, Wis. Adm. Code, on August 31, 2018.

I discussed the report and recommendations with Peter Ramanauskas of U.S.EPA's TSCA program, as part of the on-going coordinated approval process for the case. We agree with TRC's recommendations. We suggest that the additional soil sampling at the residential properties west of South 3rd street be performed at multiple, thinner intervals, such as 0 to 3 inches and 6 to 9 inches. The approach will help evaluate direct contact potential and may help explain the distribution and source of contamination at those locations.

The recommendations for additional investigative work are approved. The plan for placement of a deed restriction on the property for residually-contaminated fill materials is also approved.

Sincerely,

Jeff Ackerman
Hydrogeologist
